### Summary

- As a recent graduate from Old Dominion University with a Bachelors in Biological Science, I hope to continue my education into medical school. My goal is to become a physician or a medical research scientist.

### Experience

2019-01 -  
present

- **Research Intern**

Human Cadaver Lab, Old Dominion University

At the Human Cadaver Lab at Old Dominion University I had the privilege of starting a new research opportunity with Dr. Jennifer Katz. A new Osteology course for the study and preservation of human bones. Working independently, I gained dissection experience and researched methods used by forensic scientists for the cleaning and preservation of bone samples. I also modified protocols and performed scientific experiments in the lab with our own bone samples.

### Education

2015-08 -  
2019-05

- **Old Dominion University**

As a Biology Major at Old Dominion University, I focused on the human biological sciences. I dedicated a great deal of time to the study of human anatomy and physiology along with studies in molecular biology. I also had the opportunity to study chemistry, information/computer literacy, and the visual arts.
